

Covid-19: What have we learned from the pandemic?

From the Neolithic period to modern times, from cattle plague to SARS-CoV-2, the emergence of new infectious diseases has often been the result of changes that mankind has inflicted on the environment. This joint documentary with the French daily *Le Monde* shows how biologists, anthropologists, mathematicians and historians can help draw lessons from the COVID-19 health crisis and prevent a new pandemic from incapacitating us once again.
